# Overview

The ShipHawk-Acumatica Connector 4.2 is an application that connects ShipHawk to the Acumatica ERP system. The application is an Acumatica Certified Application (ACA): it adheres to standards set for Acumatica integration and functionality.

Please contact your ShipHawk account manager or solutions engineer to get a copy of the ShipHawk-Acumatica Connector 4.2 package.

This release includes new features and minor issue fixes.

For more information about this release and previous releases, see [ShipHawk-Acumatica Connector New Features](#).

## Requirements

### Acumatica Versions Supported

**ShipHawk-Acumatica Connector 4.2** only supports the following versions of Acumatica:

- 2022 R1
- 2022 R2

### Acumatica License Requirements

#### Acumatica Modules

The ShipHawk solution requires following modules to be enabled:

- Distribution module

#### Minimal License Tier

In alignment with Acumatica ERP license tier restrictions, the minimal recommended Acumatica ERP

license tier needed for the ShipHawk-Acumatica Connector is:

- S License Tiers

## Installation

**Important:** ShipHawk recommends that you work with your Acumatica VAR to update packages because there may be dependencies.

For information on installing the ShipHawk-Acumatica Connector, see the [ShipHawk-Acumatica Connector Installation Guide](#).

## New Features

The following provides an overview of the new features in the ShipHawk-Acumatica Connector 4.2 release.

### Optionally Update Shipping Ship-To Address and Contact Information

In ShipHawk, you can change the destination address and contact information for an order right before shipping. This is useful in case the address or contact information you have for the order is found to be incomplete or incorrect when you are about to ship. Now, if you change the address or contact information in ShipHawk, you can make sure the Ship-To address and contact information in the Acumatica Shipping record is updated accordingly. You can now specify to have ShipHawk write back address changes to Acumatica.

To specify writing back address changes from ShipHawk to Acumatica:

1. In Acumatica, select **ShipHawk > Setup Screens > ShipHawk Setup**.
2. Go to the **Import Shipments Settings in Acumatica** section.
3. Select the **Update Ship-To address & contact fields** checkbox (default is un-selected).

Note that this writeback only updates the Ship-To information in the Shipping record; it does not update the Sales Order address information or the related Customer Locations record.

*(Internal ID: SHHS-51)*

# Automatic Setup of Webhooks for Shipment Data in ShipHawk

The previous release of the ShipHawk-Acumatica Connector (version 4.1) introduced *Webhooks for Shipment Data*, where webhooks are used to get shipment information rather than API calls.

The configuration steps required that after creating a new webhook entry in Acumatica, you then had to log in to ShipHawk and manually set up the new webhook entry in ShipHawk as well (this is the “Setting Up Webhook in ShipHawk” task described in the *ShipHawk-Acumatica Connector 4.1 Release Notes*).

Now, a new webhook entry is automatically set up in ShipHawk after you create it in Acumatica: you do not have to set it up manually as described in the “Setting Up Webhook in ShipHawk” task.

*(Internal ID: SHHS-52)*

## DOCUMENT CHANGES
